accordance with the practice under Ex parte Quayle, 1935 C.D. 11; 453 O.G. 213.

14. 🔲 Other

Serial No. 07/782,696

Art Unit 3308

Restriction to one of the following inventions is required under 35 U.S.C. § 121:

- I. Claims 1-20, drawn to a device and method for grafting a prosthesis to the wall of a lumen, classified in Class 623, subclass 1.
- II. Claim 21, drawn to an occlusive umbrella, classified in Class 606, subclass 158.
- III. Claims 22-23, drawn to a spring alignment and compression resistance assembly, classified in Class 606, subclass 153.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as a reinforcing stent not intended for occluding body orifices. See M.P.E.P. § 806.05(d).

Serial No. 07/782,696

Art Unit 3308

Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations. (M.P.E.P. § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the spring assembly of Group I does not require a plurality of retaining shafts and may, instead, be formed of one piece. The subcombination has separate utility such as being utilized to connect a percutaneous port to an existing orifice.

Inventions II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations. (M.P.E.P. § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the spring assembly of Group II does not require a plurality of retaining shafts and may, instead, be formed of one piece. The subcombination has separate utility such as being utilized to connect a graft to a blood vessel.

Serial No. 07/782,696

Art Unit 3308

1 ...

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed.

Any inquiry concerning this communication should be directed to Debra S. Brittingham at telephone number (703) 308-0858.
